Andre Jefferson was born in Bronx, NY. Throughout his life journey he has honed many skills in the areas of business, creative, and educational. In his adolescence Andre was heavily involved in his communities and extra curricular activities such as church youth leadership and basketball where he learned a good base value of teamwork and ethics. He was also member of his high school Interact club where he was a liaison interaction between his local community, local government, and state government and from this experience he acquired further special social skills and perspective that helped mold his idiosyncratic nature. His educational background entails some business college experience, but his highest completed education is a high school diploma; however, Andre has practical real world experience operating in different industries, and he came to Revature with a mission and a focus to better himself and create a future.

Revature has prepared Andre in the languages of Bash, Java, HTML, CSS, and Javascript while also introducing him to their sublanguages and compatible softwares. Throughout his training he learned new and contemporary ways to implement these languages for corporate purpose. Although his work experience is predominantly business his newfound skillset in coding is an excellent pairing for any potential employer. Andre feels heavily prepared in the areas of Database management, front end development, backend development, and API/Servlets. He was conditioned to familiarize these processes via hard coding and abstract implementation. Understanding that Andre's prior coding experience was agile robotic focused Revature did their due dilligence to familiarize him with the new technologies and how they interface with different languages. He is ready to take on the challenges that further await him on his technical journey.
